

Create Sections for Quiz Questions

Last Modified on 09/07/2021 10:53 am CDT

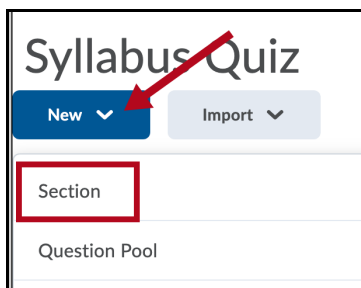

Sections are folders that contain questions. Questions within those folders may be randomized at the folder level. Sections are a good way to keep your questions organized, and one way you can accomplish randomizing questions.

To create a section in a quiz:

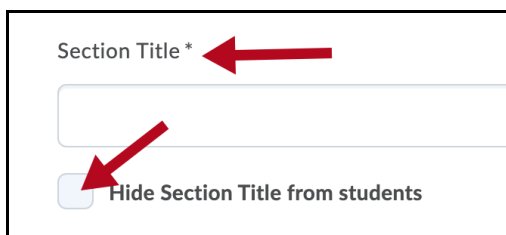

1. Go to **Course Activities > Quizzes**, and then click the name of the quiz you'd like to edit.
2. On the properties tab, click the **Add/Edit Questions** button.

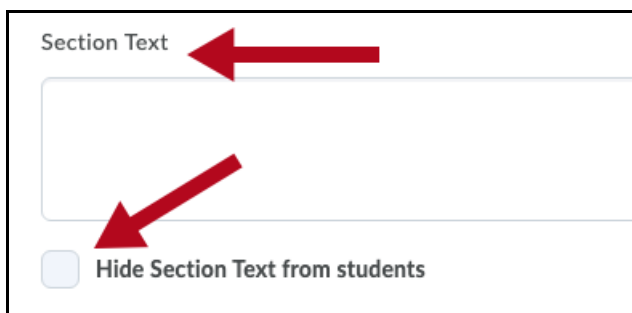

3. Click the **New** button and choose **Section**.

4. Enter a name for the **Section Title**. For example, you may want to enter something meaningful such as the chapter number or the subject matter. Click the checkbox if you don't want students to see the Section Title.

5. You can also enter **Section Text** to describe or explain the section. Again, you can click the check box if you don't want students to see the Section Text.

6. Check the box to shuffle all the questions in this section when presented on the quiz.

Shuffle questions in this section
This shuffles sections and question pools in this section. Does not cascade to sub-sections.

7. Click the **Save** button.
