

View Class Progress

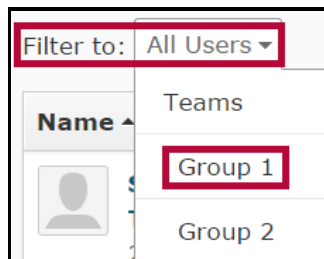

Last Modified on 05/23/2022 12:48 pm CDT

The Class Progress tool allows you to see statistics and details for the current students in a course. You can see student data for each course tool, such as discussions or quizzes, and for content, logins, and grades.

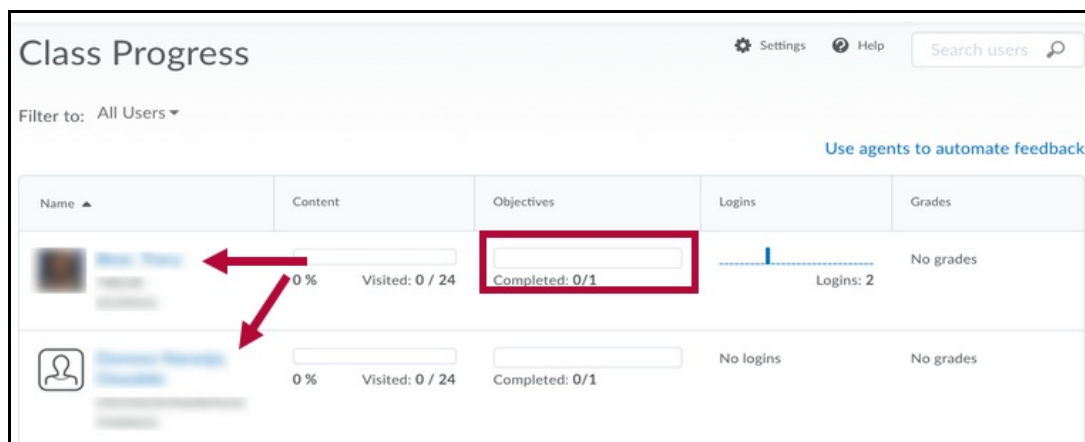

NOTE: Logins & Course Access data only represent the last 30 days, NOT the full term.

Class Progress Page

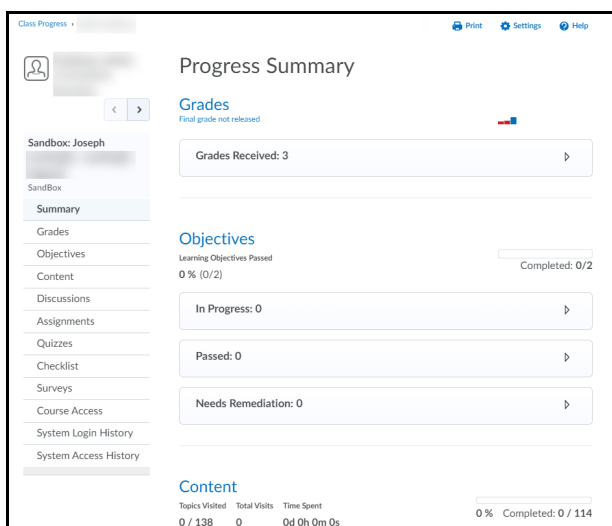

- To access Class Progress, click on **Course Activities > Class Progress**.

- To view progress by group or sections, use the **Filter to:** drop-down.
- The first page is the Class Progress page.

- Click a progress bar to view a student's progress on that course tool.
- Alternatively, click on a student's name to see the student's Progress Summary page.

- The selected students information is shown. Click a module along the left to see information for the topics the student has available and/or visited as well as other pertinent information.

- In this example, the "1st relay video" item has release conditions set. (e.g. student was required to view a different video before this video was made available to them)

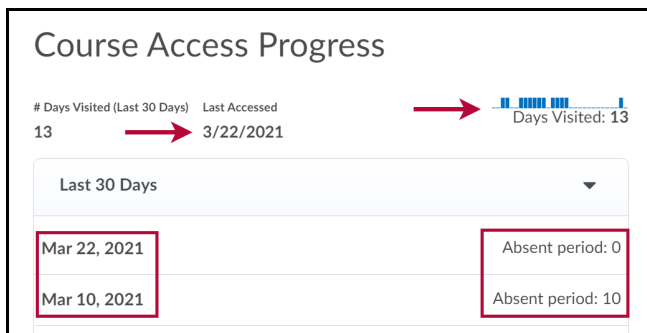

- You may view each course tool on the sidebar of the Progress Summary to see details for the student in that particular area of work.

Course Access

- You can see the number of days the student has logged in to the course and the last login at

the top of the screen.

- The left column shows the dates the student accessed the course.
- The right column shows the number of days missed between access dates.

Login Tracker

- You can view a student's System login dates as well as the number of logins by viewing the login tracker on the Class Progress page or by selecting Login History on the User Progress page.
- If you hover over the tracker, a box will appear showing the date and number of logins on that date. Move the mouse across the graph to view other dates.

Grade Progress Quick Check

- As with the Login Tracker, you can hover over the Grades column and quickly view grade scores.
