

HTML Editor Basics

Last Modified on 03/18/2026 9:49 am CDT

There are multiple parts to the HTML editor. The upper toolbar of the HTML/WYSIWYG editor is very similar to the toolbar in most document editors, such as MS Word. If you do not see this full toolbar, click the [...] icon on the far right of the window. Text can be copied and pasted from other sources (MS Word, Google Docs, etc.) with the formatting retained.
