

Add a Curve Using Adjusted Grade

Last Modified on 09/02/2021 8:29 am CDT

The Adjusted Final Grade column in a course's gradebook in D2L allows an instructor to modify a student's final average. Instructors can use this column to curve student averages as well.

Show Video Walkthrough

Apply a Curve.

1. Click on **Grades** from the navigation bar.

2. Locate the **Final Adjusted Grade** column beneath the Final Grades Column. Click the dropdown arrow and choose **Enter Grades**.
3. Click the arrow beside Final Grades and select **Transfer All**. This will move students' final calculated grade into the final adjusted grade column.

4. A new confirmation window will appear. Click **Yes**.

5. Locate the highest score in the Final Calculated Grade column. Subtract the points earned from the total points available (ex: $200-180=20$).

6. Take the difference in points and add that difference to the numerator column of each student's final adjusted grade.
 -
7. Click **Save**. Note the difference between the Final Calculated Grade percentage and the Final Adjusted Grade percentage.
 -
8. To release these grades and make them visible to students, Click the arrow beside "Final Grades," and select **Release All**.

9. Click **yes** on the confirmation window that appears.
 -
10. Click **Save and Close**.
