# Add YuJa Video to Content Modules

Last Modified on 08/14/2023 8:00 am CDT
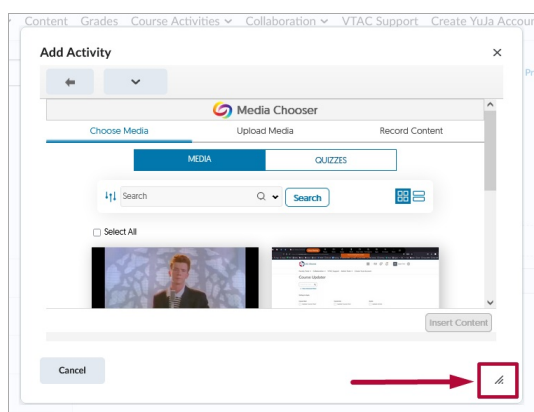

Show Video Walkthrough

> **NOTE:** When you are creating a news announcement and need to embed a YuJa video, use the **Source Code (HTML Editor)** option, instead of the **[Insert stuff]** -> **[Enter Embed Code]** route.
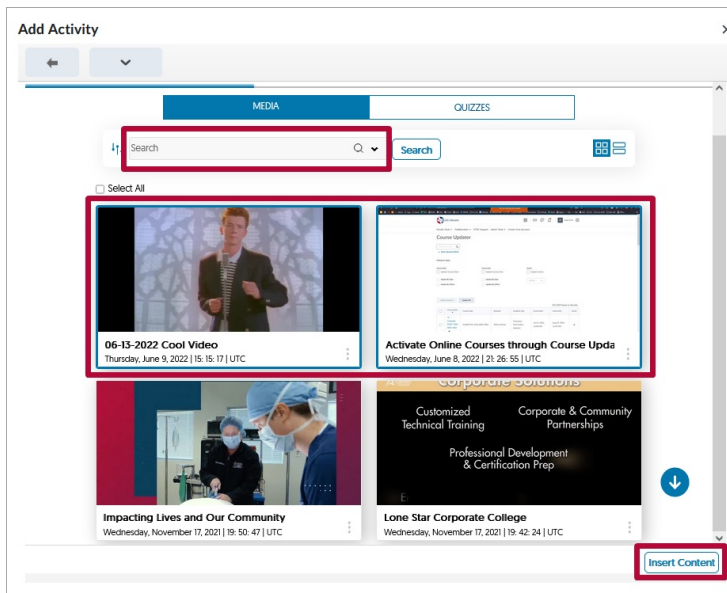

1. Under **Content**, navigate to the module you wish to add your YuJa video.

2. From within the module, click on **[Add Existing Activities]**, scroll down and click on **[YuJa Media QuickLink]**.

3. Pull and drag the corner icon as shown here to expand the **Media Chooser** window.

4. Highlight your video(s) you wish to upload, click on **[Insert Content]**. You can type in the name of the video in the **Search** field to find your video faster.
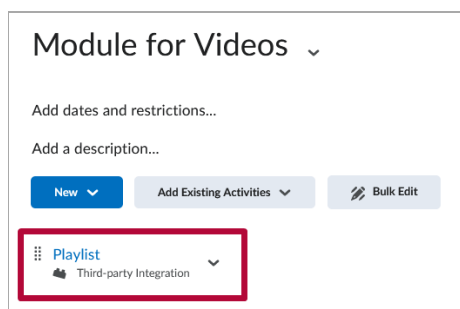

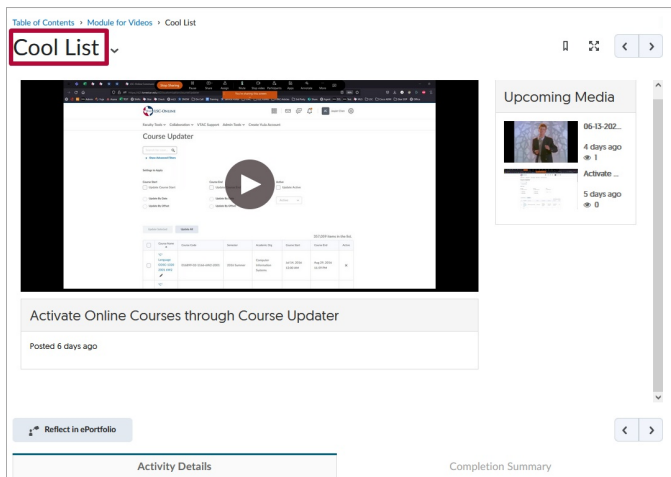

5. Back in the D2L Module:
   - Upon inserting single video, the video title will show up in the module.

   - Upon inserting two or more videos at once, it will show up as **Playlist** within the module.

6. In the **Playlist**, you can rename the playlist by clicking on the name.
   For this example, I renamed **Playlist** to **Cool List**.

7. Scroll further down for more options to **[Add dates and restrictions]**, or to **[Add a grade item]**.

8. Your YuJa videos should now show up in your module.
